

SourceLens — Final System Evaluation

A real bilingual run—from trusted sources to 26 useful outputs

Charge While You Shop · 10 August 2026

Seven sources. One transparent evidence boundary.

7

ready sources

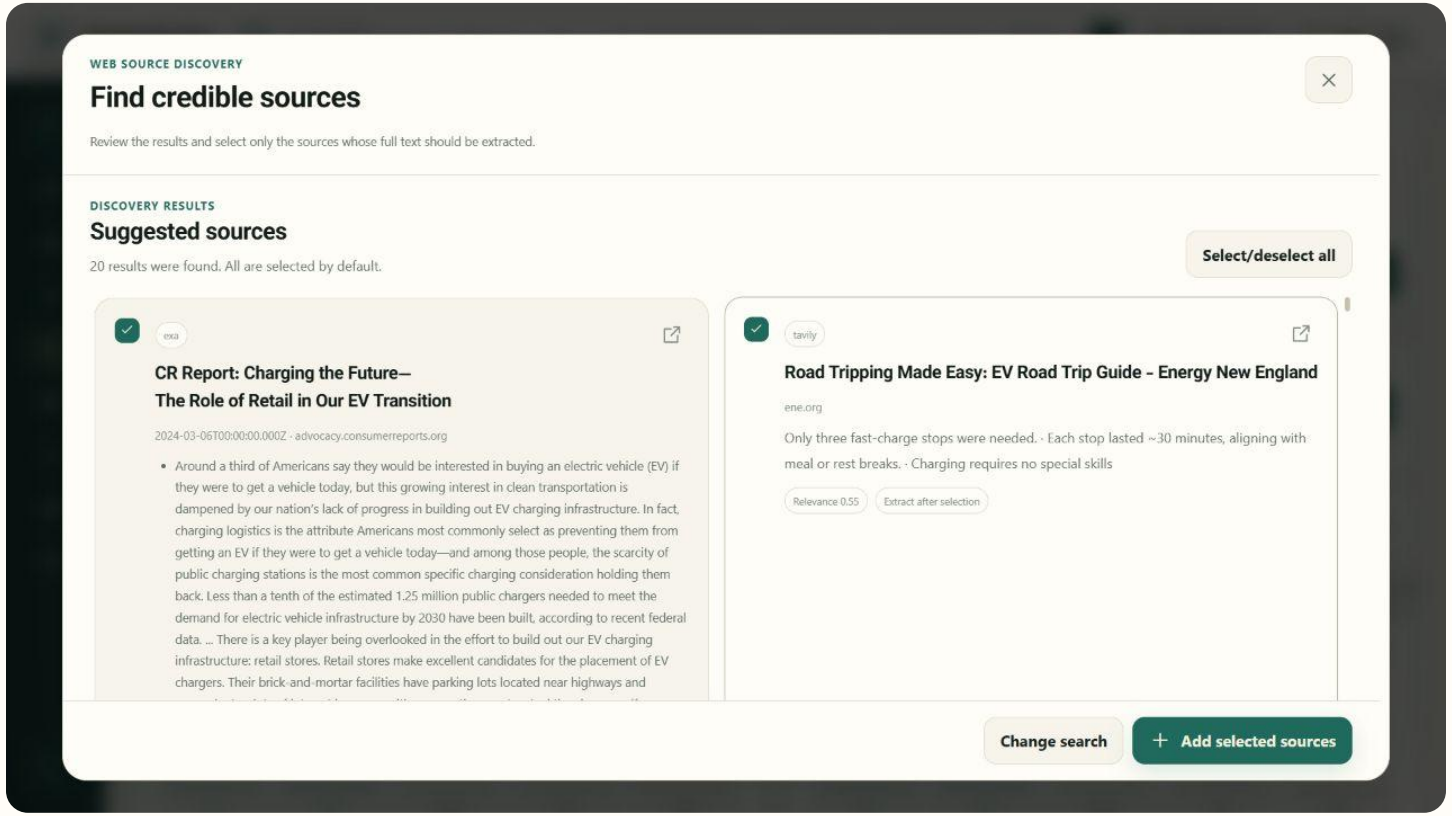

236

indexed chunks

Two CC BY 4.0 papers and five official web sources were added through the same Upload and Search flows available in the app.

2 open papers + 5 official web sources

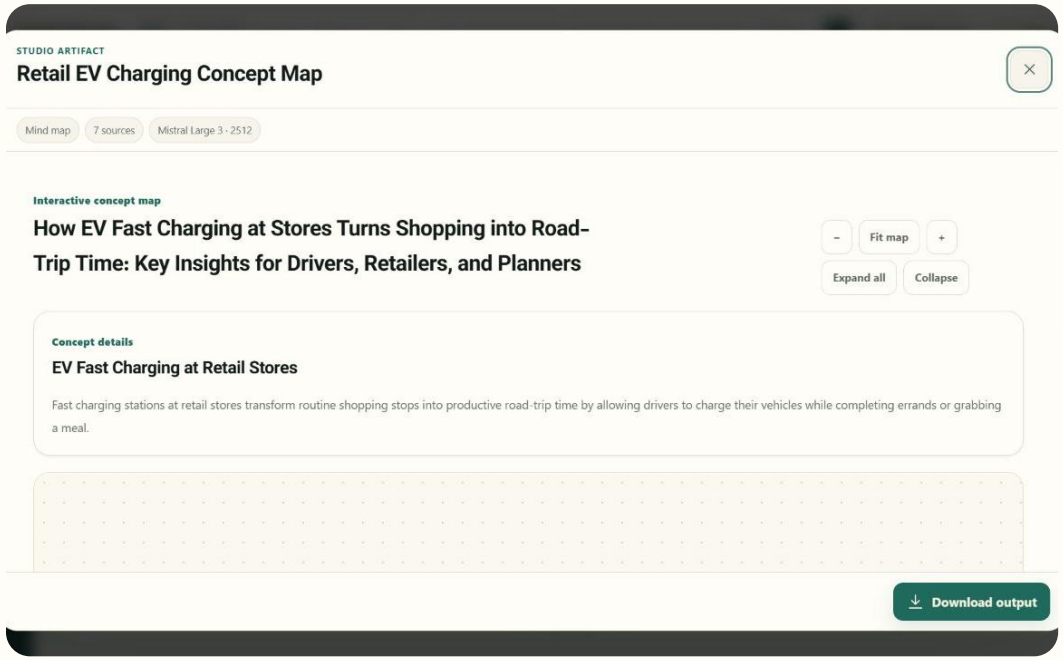

Search becomes a reusable research source

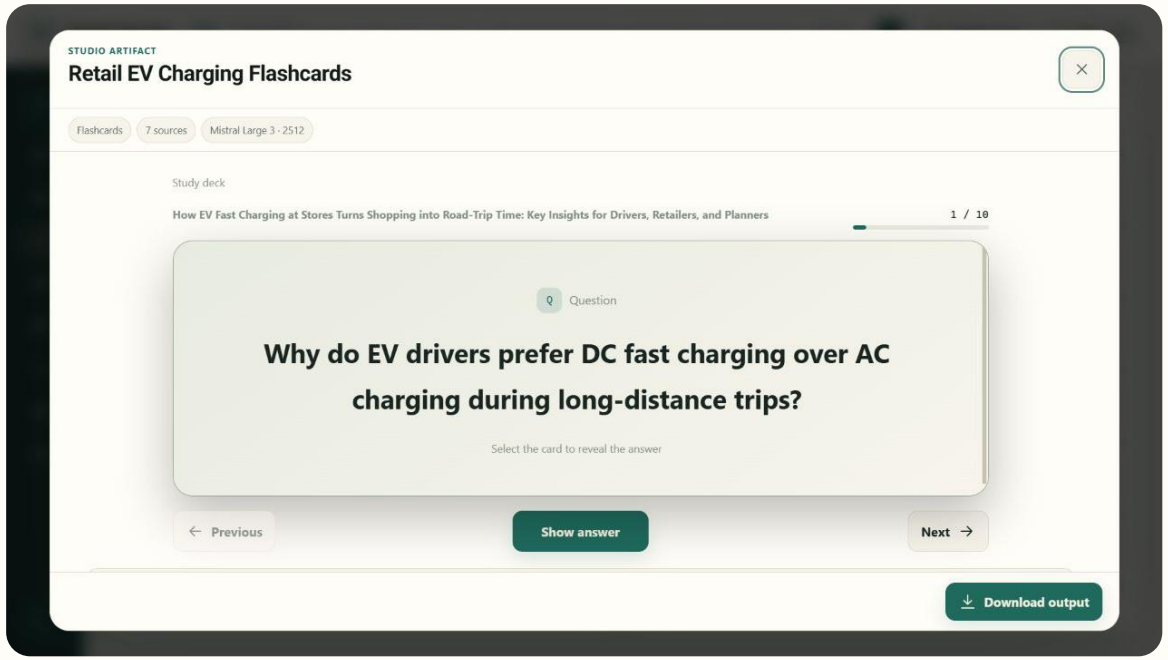

The app searched the web, let the user select results, extracted the pages, and indexed them beside the uploaded papers.

Search · select · extract · index

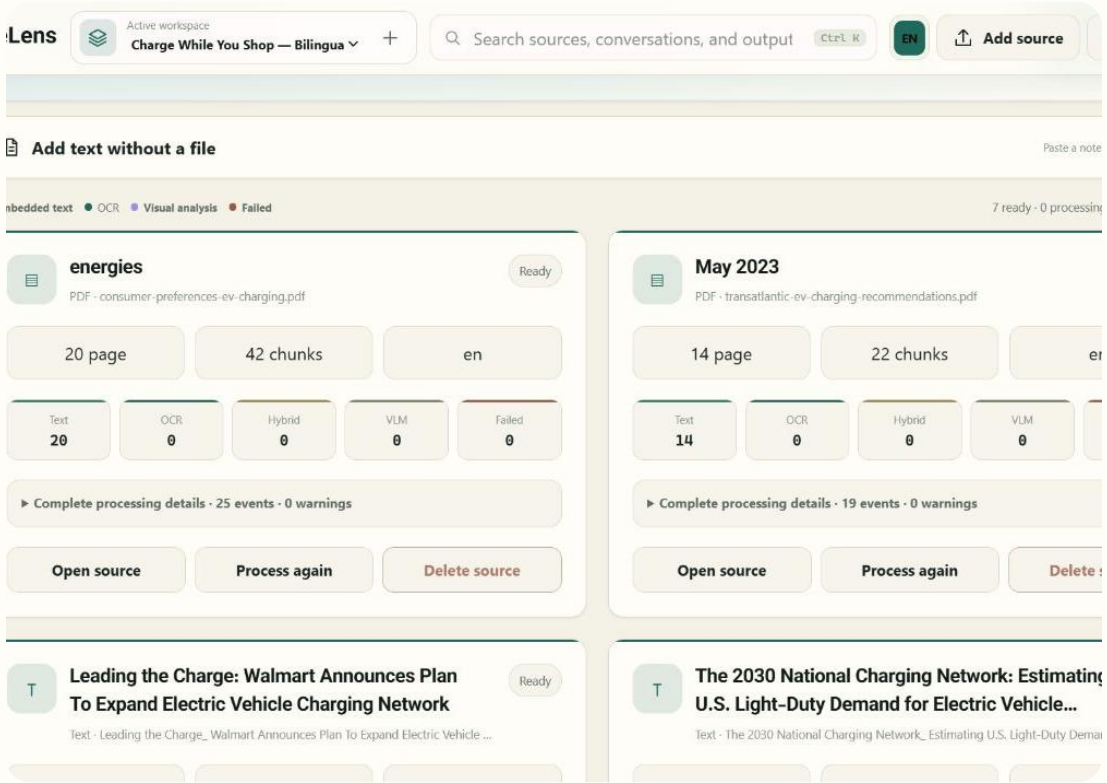

Studio turns one corpus into many useful forms

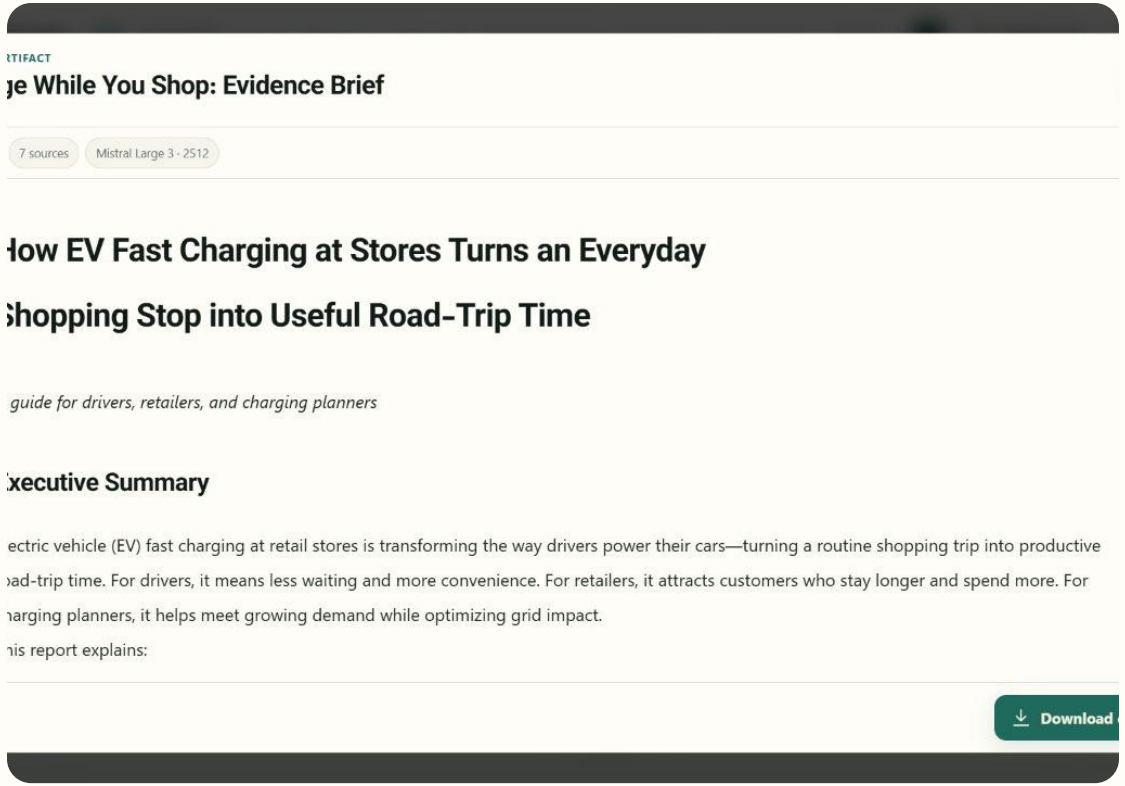

The same 236 chunks produced all 13 Studio formats in English and Persian—26 app-generated artifacts in total.

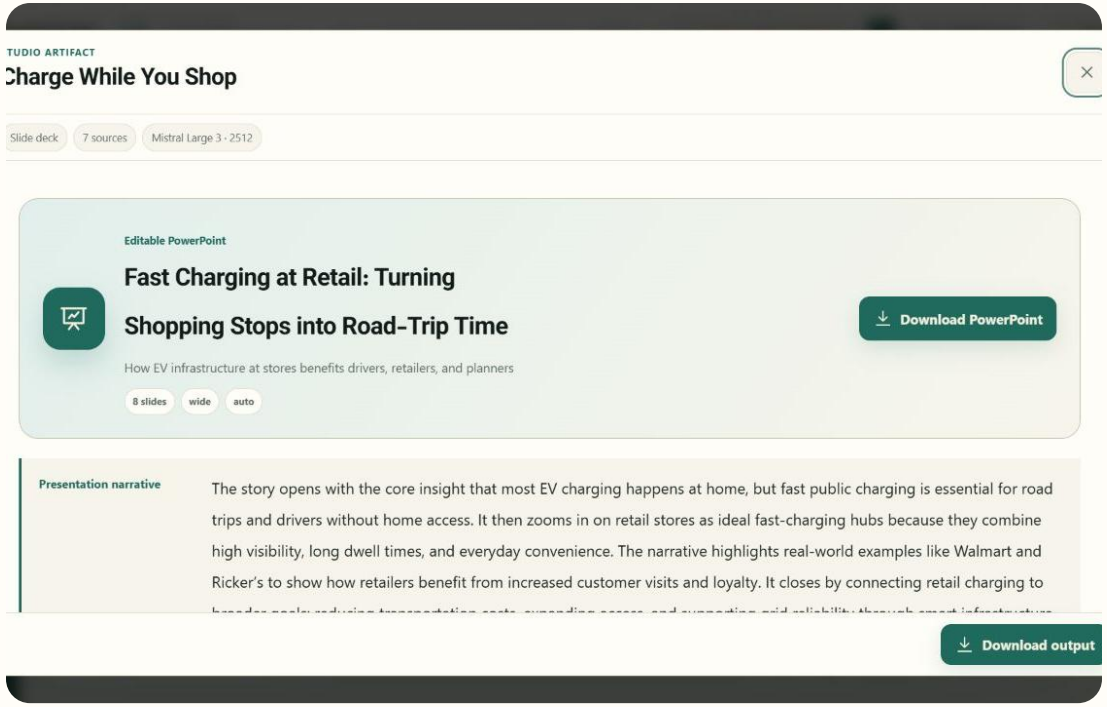

Grounded answers—from retrieval to citation

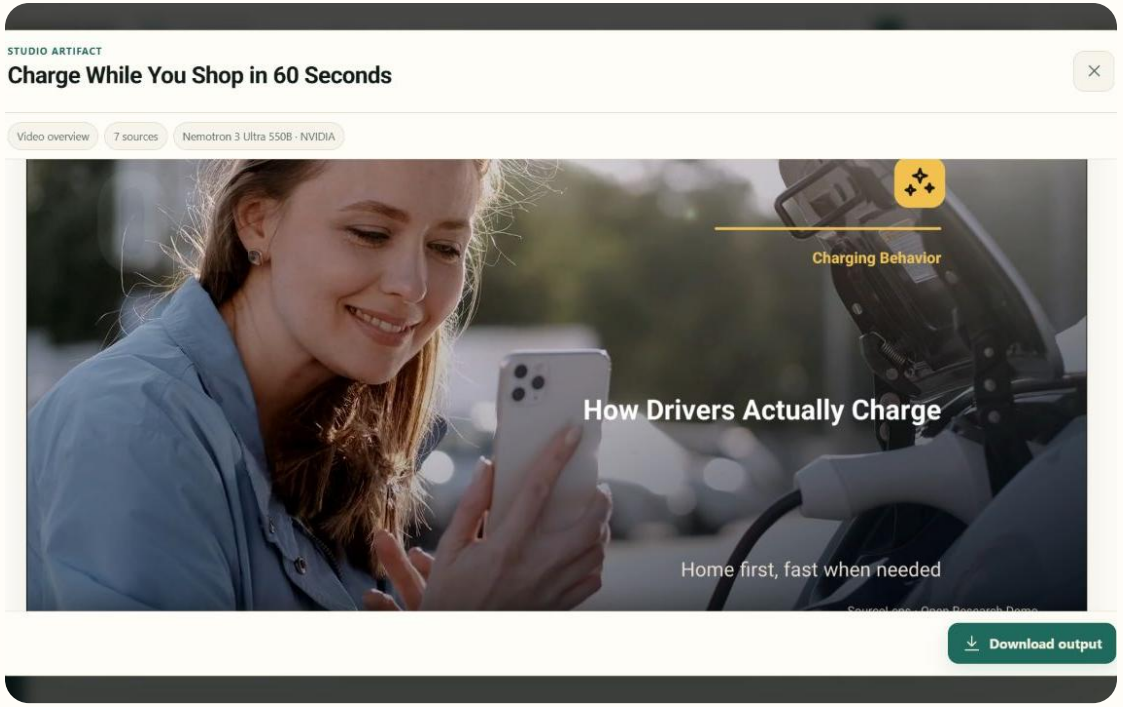

Source selection, hybrid retrieval, synthesis, and the evidence panel share one explicit source boundary.

Live, durable, inspectable execution

live events and real progress

cancel and retry

restart recovery

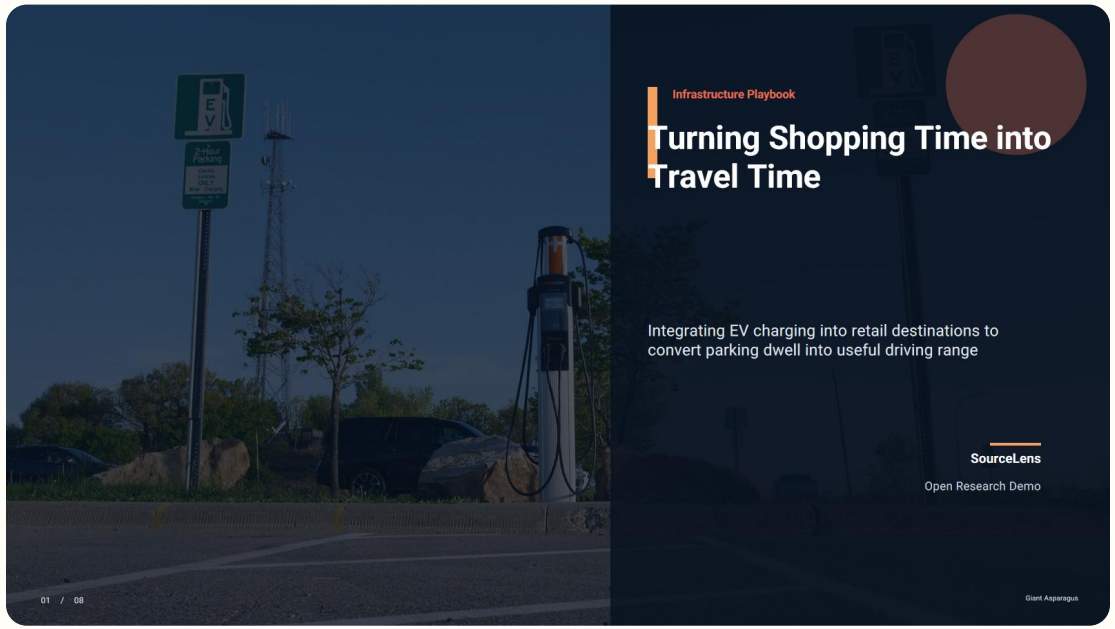

downloads and quality manifests

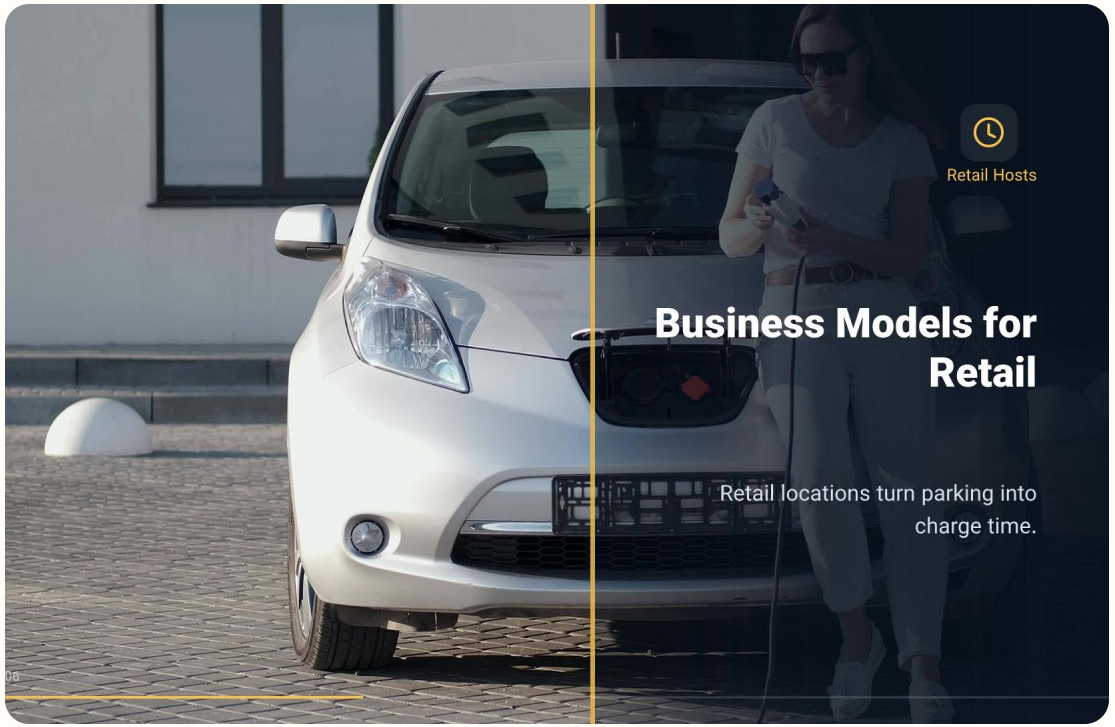

Thirteen formats, two languages, one corpus

Audio	Report	Concept map	Flashcards
Quiz	Infographic	Data table	Chart
Timeline	Comparison	Research gaps	PowerPoint
Video			

26 application outputs; no manual content rewriting

Editable slides and cinematic video

Editable PowerPoint built from verified evidence

https://github.com/msmahdinejad/SourceLens/raw/main/docs/demo/outputs/en/charge-while-you-shop-slide-deck.pptx

Full HD video with real API media

https://github.com/msmahdinejad/SourceLens/raw/main/docs/demo/outputs/en/charge-while-you-shop-video-overview.mp4

Quality gates passed

26	50 s	Full HD	8
ready artifacts	video runtime	video resolution	editable slides

The full Python suite passed
Node tests, JavaScript syntax, and license audits are green
Videos: natural-speed audio, H.264 + AAC, captions, and clean timelines

Natural bilingual audio with Live 3.1

13 dialogue turns
Puck + Kore voices
Downloadable transcript

The app prepared a source-grounded dialogue, then rendered it with Gemini Live 3.1 and Puck with Kore or Aoede at natural speed.

117.38 seconds
Gemini 3.1 Live
Unchanged speaking speed

Release evidence: quality, licensing, reproducibility

Retrieval

recorded recall and citation precision

Artifacts

hash, size, and sidecar manifests

Media

real Pexels assets with exact credit

Video

Full HD, H.264, AAC

Privacy

no key, private ID, or local path

Release

Windows/Linux CI and license audit

Release verdict

The end-to-end run validates multilingual ingestion, Search, agentic retrieval, durable live Studio jobs, structured learning outputs, editable slides, natural audio, and licensed-media video.

Every published artifact is the app's own output; manifests preserve hashes, quality checks, and media provenance.
