

SourceLens — Final System Evaluation

A real bilingual run—from trusted sources to 26 useful outputs

Charge While You Shop · 9 August 2026

Seven sources. One transparent evidence boundary.

7

ready sources

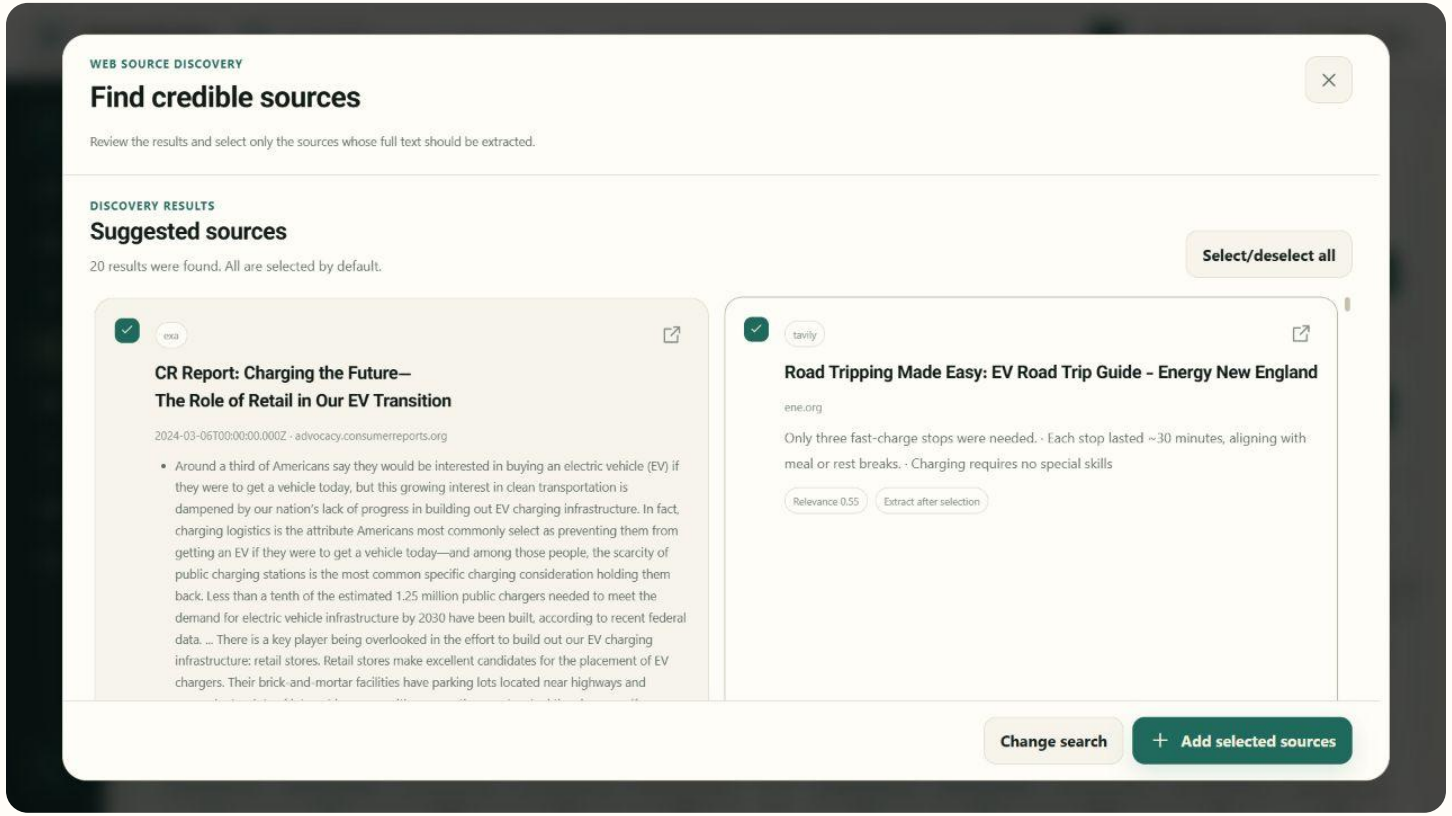

236

indexed chunks

Two CC BY 4.0 papers and five official web sources were added through the same Upload and Search flows available in the app.

2 open papers + 5 official web sources

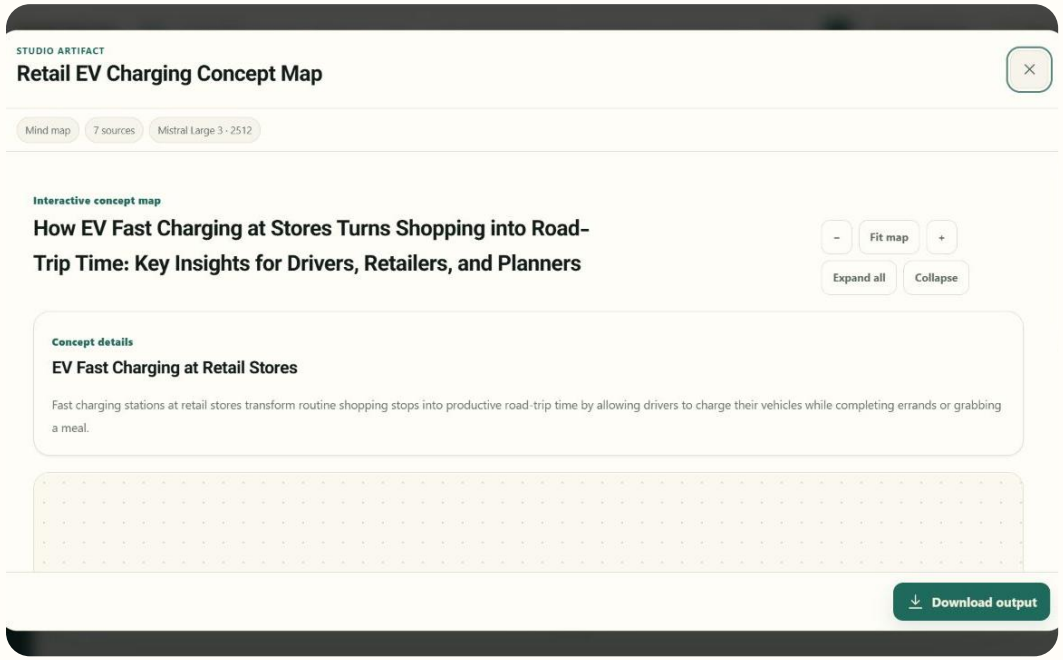

Search becomes a reusable research source

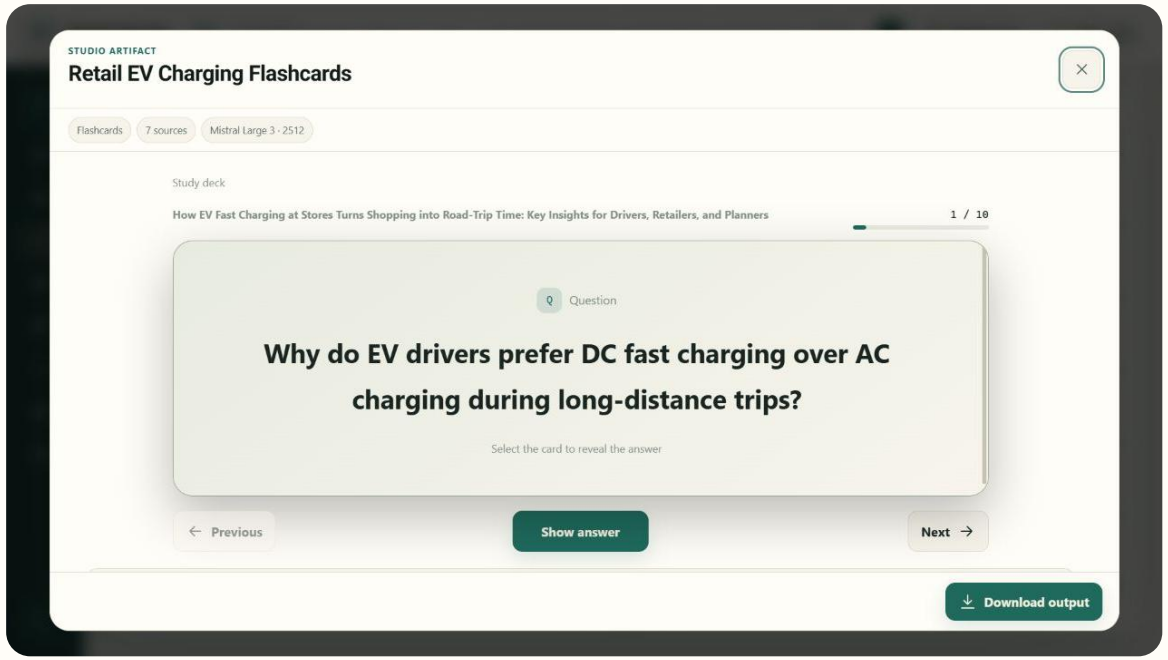

The app searched the web, let the user select results, extracted the pages, and indexed them beside the uploaded papers.

Search · select · extract · index

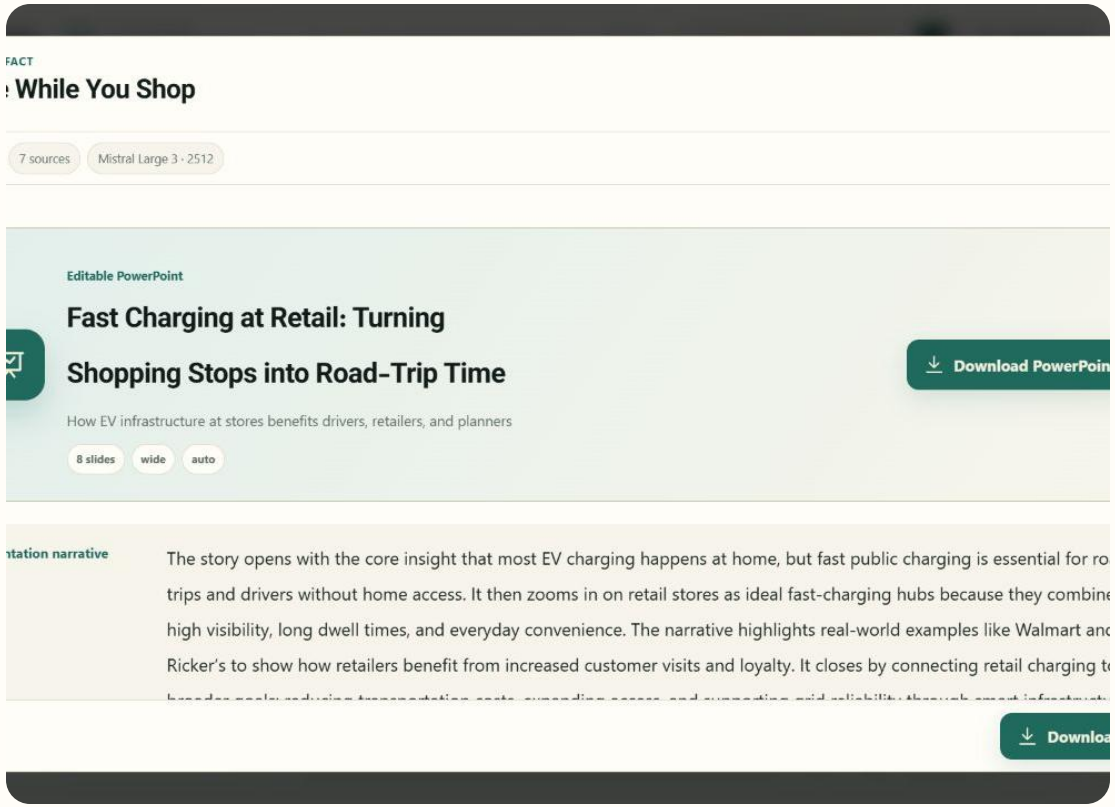

Studio turns one corpus into many useful forms

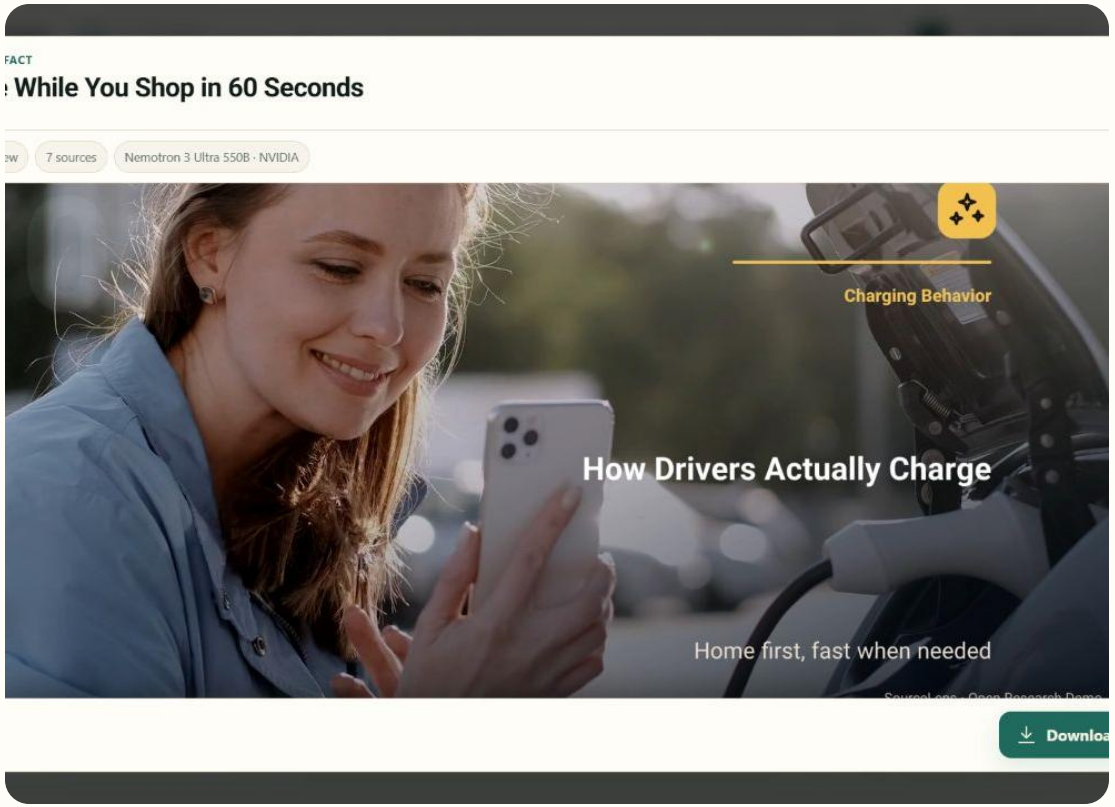

The same 236 chunks produced all 13 Studio formats in English and Persian—26 app-generated artifacts in total.

Editable slides and cinematic video

8-slide editable PowerPoint

https://github.com/msmahdinejad/SourceLens/raw/main/docs/demo/outputs/en/charge-while-you-shop-slide-deck.pptx

Exact 60-second Full HD video

https://github.com/msmahdinejad/SourceLens/raw/main/docs/demo/outputs/en/charge-while-you-shop-video-overview.mp4

Quality gates passed

26	60 s	Full HD	40/40
ready artifacts	each video	video resolution	UI + renderer tests

The full Python suite passed
Node tests, JavaScript syntax, and license audits are green
Videos: natural-speed audio, H.264 + AAC, captions, and clean timelines

Natural bilingual audio, generated locally

8 dialogue turns
Natural-speed audio
Downloadable transcript

The autonomous audio workflow planned two source-grounded conversations and rendered them with configured Piper voices—without changing speaking speed.

English: 94.7 seconds
Persian: 149.4 seconds
28 live events per artifact

Release verdict

The end-to-end run validates multilingual ingestion, Search, agentic retrieval, durable live Studio jobs, structured learning outputs, editable slides, natural audio, and licensed-media video.

Every published artifact is the app's own output; manifests preserve hashes, quality checks, and media provenance.
